# Work With Us

**Get To Know Us First!**

Freecharge a subsidiary of Axis Bank Limited founded in 2010, is a Fin-Tech organisation revolutionizing Financial Products through technology.

At our core, we're a creative company. Ideas and pixels is where we live and we love building magical products that make our users feel 'wow'. At Freecharge, you'll have the chance to do the best work of your life. We're on a journey to build something new, something different and something innovative & that requires passion to build such incredible products.

Come join us and shape the future of Fin-Tech.

**Do You Make The Cut?**

We are hiring an experienced and passionate developer to code, develop, and enhance our innovative product with the rest of our ambitious dream team.

You will be responsible for the server-side web application logic enhancement and development. You will be working in a fast-paced world with some of the smartest minds in the industry.

**Title: Software Development Engineer (Backend)**
**Location: Gurugram**
**Experience: 2-4 Yrs.**
**Education: Bachelor's / Master's in Software Engineering**

**Responsibilities**

- Participate in the entire application software development lifecycle, focusing on coding, debugging, and code coverage.
- You will write high performance, scalable, bug-free code and you will work on distributed systems for massive scale systems.
- Performing unit and integration testing for the product features.
- Optimize and refactor existing codes to follow the best principles.
- Manage cutting-edge technologies to improve legacy applications.
- Liaise with developers, team leads, product & program management to identify new features.
- Gather and address technical and design requirements.
- Follow emerging technologies.

**Sounds Like You?**

- 2+ years of software development experience with Enterprise Java (JDK 8 and above), Spring (Boot, MVC, AOP, DI), ORM Frameworks.
- Solid understanding of data structures & algorithms and their space & time complexities.

- Good understanding of multithreading, MVC, and strong OO skills with demonstrated experience in developing complex and reusable APIs.
- Strong experience working with Databases like SQL (MySQL), etc.
- Experience working in an Agile environment.
- Understanding of the full software development life cycle.
- Ability to gather and analyze new features and integrate them with the existing functionality.
- Good to have knowledge of NoSQL Databases.
- A passion for technology and the ability to learn new concepts quickly.
